

PYROTEK REFRACTORY LININGS BOOST PERFORMANCE OF EXTRUSION LOG FURNACES

Pyrotek supplies parts for extrusion log furnaces, ranging from precast or machined refractory burner tiles and blocks, through to complete replacement sections (including steel shells).

Applications of these components include precast refractory or ceramic fiber tiles and blocks; cast-in-place refractory replacement linings; complete finished furnace modules, and backup insulation.

Burner tiles / blocks made from precast refractory are cast to the dimensions specified by the customer. Pyrotek has a wide range of refractories to choose from for this application.

Components in machined ceramic fiber are machined from thick high-temperature ceramic fiber board according to individual customer specifications.

Replacement Linings

Pyrotek can reline log furnace sections using castable refractory and / or ceramic fiber board.

Furnace Modules

Complete replacement modules for log furnaces can be fabricated by Pyrotek.
