

PYROTEK INC AND IGC TECHNOLOGIES FORM ALLIANCE TO MARKET POWDERED FLUXES

Pyrotek Inc. and IGC Technologies LLC have entered into a strategic alliance to market powdered fluxes to the aluminium industry in North America. Pyrotek, a leading supplier of innovative solutions to the aluminium industry, will become the exclusive North American distributor of aluminium fluxes manufactured by IGC Technologies, including cover, dressing and cleaning fluxes.

Pyrotek, headquartered in Spokane, Washington, has been the leading provider of value-added solutions to the aluminium industry for over 50 years. The company remains privately owned since its inception in 1956, offering industry-leading technical expertise and global resources with 65 locations across 31 countries.

IGC Technologies, LLC, headquartered in Milwaukee, Wisconsin, has been a leader in casting and defect solutions, blended powdered metal treatment and coating products to the non-ferrous and ferrous industries for the last 25 years. The company is a worldwide leader in the manufacture of consumable foundry products and supplies its unique blends of industrial minerals throughout the USA, Canada, Mexico, South America, Australia, Europe and Asia. www.igctechnologies.com

This strategic alliance will combine unique in-depth market knowledge with superior manufacturing, product and application expertise and will provide customers with a superior product solution tailored to specific process requirements and at competitive conditions.

Pyrotek/IGC have a full line of dressing, cover and wall cleaning fluxes including injectible, sodium free and brass and copper formulations. The choice of flux, like many other products, can be application-specific and Pyrotek and IGC provide the technical expertise to ensure the optimal choice of flux and operating practices for your specific operating environment.
